

## Broker

Benefits:

- Open system in J2EE and "n" tier architecture.
- For Brokers, Investment Funds, Portfolio Management and Custody Institutions
- Modular and Integrated

BROKER is a modern software application for brokers, investment managers, treasury departments and custody institutions; backed by high quality of service, international standards and best practice in the industry.

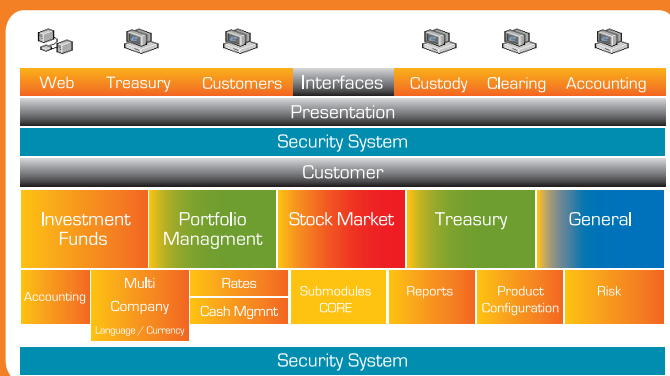

### SOLUTION FOR INVESTMENT INSTITUTIONS AND BROKERS

BROKER offers superior technical and functional capability in the field of stock trading and investments. Risk control and transaction management using the most advanced and modern software technology (J2EE) to provide open standards to integrate with other systems and an agile response to new needs in the organization.

Financial market dynamics require adaptive models to new types of products and to demands from sophisticated customers. In this environment, brokers and investment companies need to put their best efforts in new products and services with high added value for their clients. They need to maintain profitability and a strong position in the market with a technological platform that is efficient, secure and that responds to the changing needs of the market

BROKER provides complete management of the investment cycle; from order entry to settlement, liquidity events and overall management of the position of the portfolio.

BROKER has been designed with the most advanced, open technology that avoids obsolescence due to its flexibility and high degree of parameterization and modular functionality that can be added as requirements dictate.

### JAVA/J2EE, World Standard for large scale enterprise applications.

Developed with Java technology and using an "n" tier architecture model; BROKER is executed within a J2EE Application Server over a Websphere platform and connectivity using Web Services and XML messages.

This is a solution created from the collective demands of the banking sector for the substitution of inflexible legacy applications. BROKER will improve your performance with an open platform and an architecture that has been designed for flexibility and growth.

This is the BROKER Vision, supported by more than a decade of evolution and maturity of financial development and implemented using the CMM and ISO standards.
